B2B ecommerce, accelerated.

SITECORE EXPERIENCE COMMERCE™ B2B ACCELERATOR

Consolidate. Simplify. Improve.

MAKE B2B ECOMMERCE SIMPLE FOR YOUR CUSTOMERS – AND YOUR BUSINESS.

When it comes to B2B ecommerce, the name of the game is simplicity.

Gone are the days of disconnection between sales channels, administration and operational management, and with so many factors to consider, businesses need powerful tools that aren't difficult to learn and use.

The Sitecore Experience Commerce B2B Accelerator automates and combines complex wholesale processes through intuitive storefront and backend interfaces to remove common frustrations that B2B businesses encounter when adopting a digital strategy.

An effective wholesale system has distinct demands and requires unique capabilities when compared to B2C, and in an increasingly competitive environment, it can be increasingly challenging for merchants to distinguish themselves from the competition.

The B2B Accelerator adds cutting-edge B2B functionality that caters to varied business models and channels through a dashboard familiar to businesses already utilising Sitecore while still easy to adopt for new users.

Harness control of your B2B ecommerce business - without the high costs or technical hassle.

THE BUSINESS CHALLENGES THAT B2B SELLERS FACE

Consolidate all B2B management processes by designating privileges and autonomy to account managers and sales reps while making it easier for clients to complete purchases without assistance. Also by having catalogs, organisations, sales and merchandise information easily accessed, controlled and monitored from one place.

Control complex purchasing workflows with mixed customer requirements based on customized approval processes involving organisations, sales agents, purchasers, admins and more.

Improve customer experience while offering personalised, memorable and efficient multi-channel interactions with clients.

Aggregate data across multiple channels, gaining valuable insight into how your customers are behaving and where to focus on improving your business.

Maintain a competitive advantage and adaptability while anticipating and staying prepared for shifts in market and consumer behaviour.

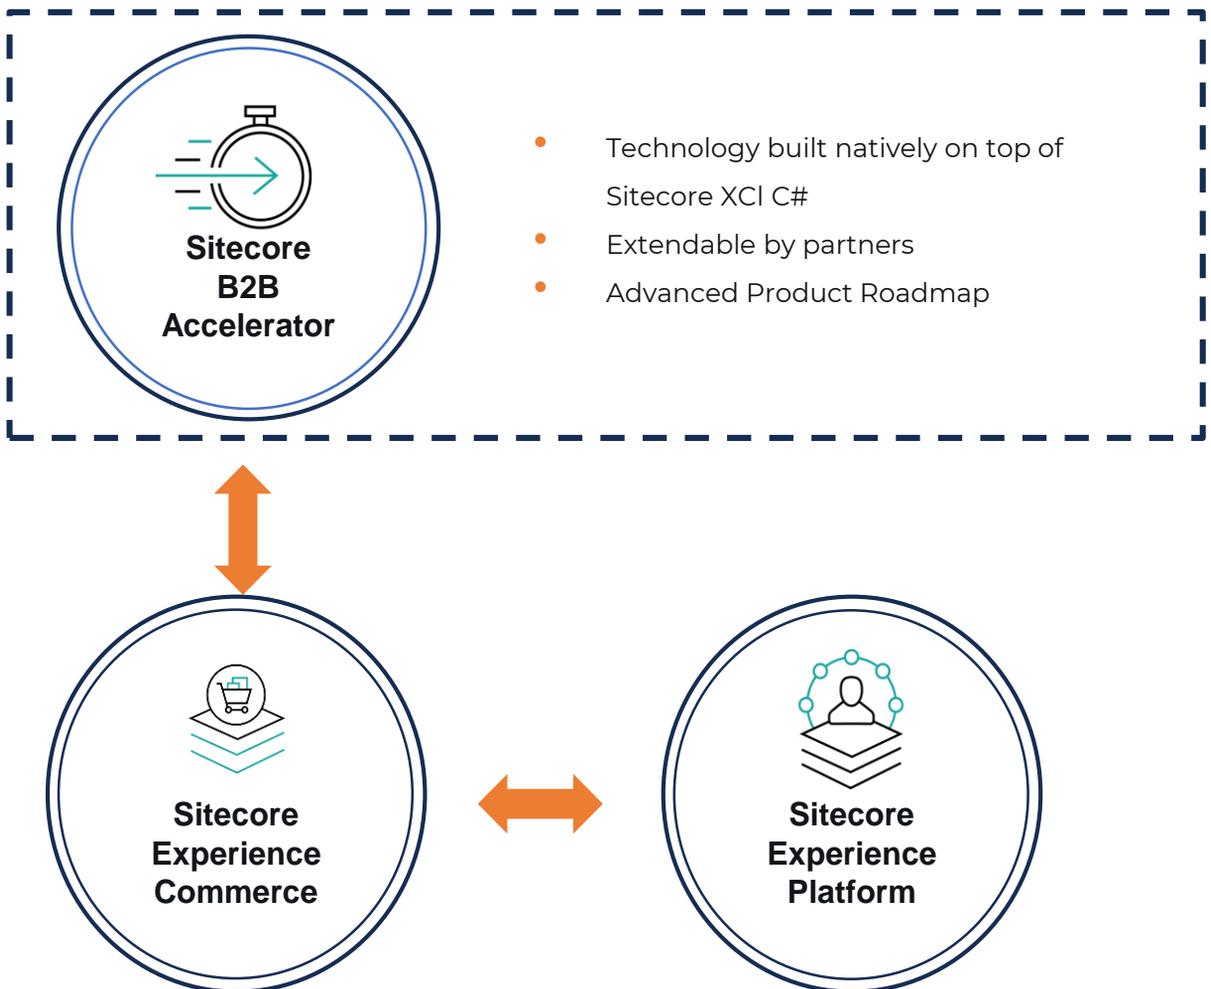

Maximise revenue and eliminate overhead by increasing automation, self-serve functionality and expediting internal processes.

Reduce time spent on manual sales tasks allowing clients and users to make their own decisions within the bounds of authority level and permission management.

BUILT DIRECTLY ON TOP OF NATIVE SITECORE ARCHITECTURE

The B2B Accelerator seamlessly connects with Sitecore framework and utilises existing technology for:

- **B2B Personalisation**
- **B2B Experience Profile**
- **B2B Analytics and Reporting**

KEY BENEFITS

What's most important is the value that the B2B Accelerator brings to your business. We've designed it so brands experience numerous direct benefits to their storefront and management processes

Faster time to market

Fully integrate within 3-6 months

Reduced implementation cost

Avoid costly ground-up development

Greater value to clients

Foster loyalty by making purchasing easier

Revenue optimisation

Reduce overhead and focus on generating sales

Distributors, organisations, sellers and buyers

Increased productivity

Automated, authority-based self-serve tools

Better management efficiency

Total control over all interactions and processes

Seamless migration and integration

Pre-built foundation to support extending Sitecore XP Commerce

Improved distribution control

A hub for manufacturers, distributors, organisations, sellers and buyers

FEATURE-RICH B2B ACCELERATION

Basic B2B Functions

- B2B Personalised pricing

- B2B Analytics & Report
- Advanced Sales Rep
- Advanced B2B Workflow
- Sales Affiliates Module
- B2B Personalisation
- Business Intelligence
- Sitecore Cortex in data analysis
- Other Advanced functionalities

A close-up, low-angle shot of a smartphone's camera lens, heavily tinted with a deep blue color. The lens is the central focus, with its glass surface reflecting light. The surrounding phone body is also visible, showing a metallic or plastic finish. The background is dark and out of focus.

**STOREFRONT
ACCELERATION**

Personalised Catalog

A must for B2B ecommerce management - this is a complete expansion upon Sitecore's existing catalog functionality. Now admins can customize catalogs for different organisations, each possessing its own product and price list, along with privileges afforded to that client. Price and product adjustments will be accessed via login after registering for an account.

Quick Order

A high-end search feature will allow buyers to locate products via product name or SKU quickly and from one page without unnecessary mis-navigation. CSV files can also be uploaded for the fast requisition of predetermined purchase lists, tailor-made for large volume orders and designed to save time and improve experience. Auto-complete search is supported.

Company Credit

Certain accounts can be granted unique payment terms at an organisation or individual level. This "credit" arrangement is an offline payment option that accelerates the order process and fosters a loyal relationship between buyer and B2B seller. Credit limits are customizable and unique to each client and/or organisation.

Order Approval

Certain purchases require many levels of approval when they exceed designated thresholds, consuming time and taking away from the task at hand. The B2B accelerator enables easy access and facilitates rapid cross-departmental approval by making purchase data and history readily available to all members of an organisation.

Maximum Order Value

Budgets can be set by an organization, allowing its members to only make purchases under a specified limit. If the limit is exceeded, the order will automatically be stored for approval under "pending" status. This permission management ensures that atypical purchases don't go unnoticed while standard orders won't consume unnecessary time through approval workflows.

Order Template

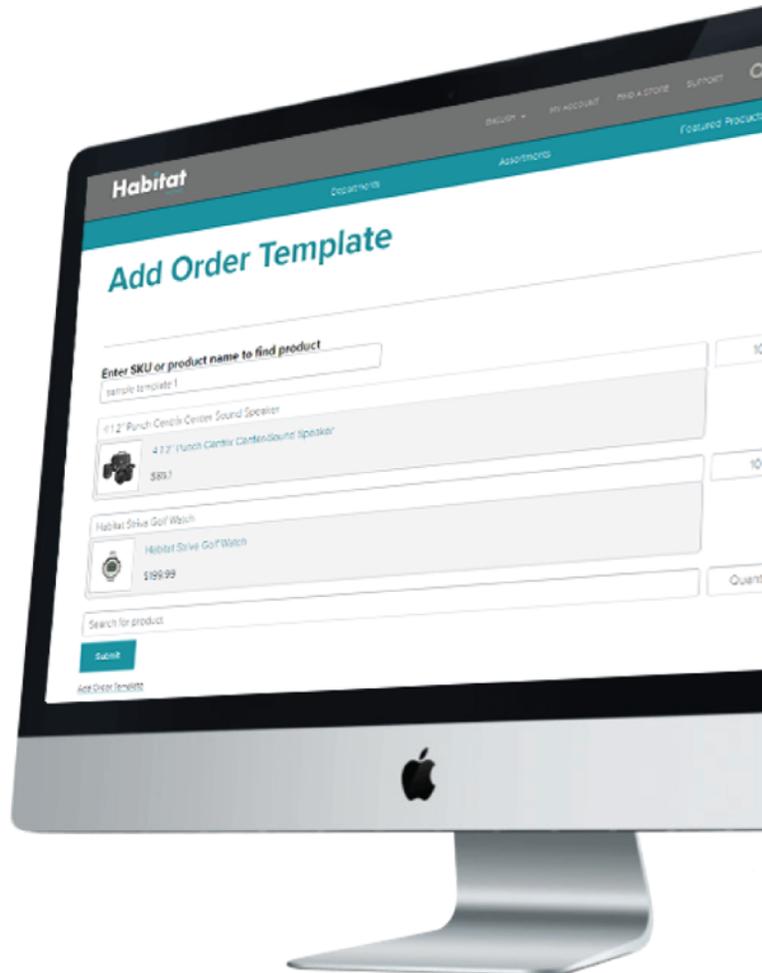

Up to 1000 order templates can be saved, eliminating the need to waste time building extensive repeat orders. Template orders are placed with a few clicks and can be customized at any time, eliminating the need to browse extensive catalogs repeatedly.

Request for Quote

Organisations can request specific discounts via a button on the checkout page and begin the negotiation process with the seller. A threshold can be set by the seller then a request, respond, negotiate, agree workflow follows. The feature includes a message function and a saved negotiation history for each individual organisation.

B2B Promotion Notifications

A feature to ensure that savings won't be missed. View unique promotions available through the "My Promotions" menu and if products in an order are eligible for promotion, the system will automatically notify the buyer. The system will automatically upsell complementary products and offer 'buy x, get y discount' deals when appropriate.

Consolidated Merchandising Panel

This tool consolidates the process of creating new custom catalogs: create, delete or duplicate, then assign the catalog to an organisation. Sellable items can be controlled from within by adjusting pricing and assigning them to categories pt then appear in personalised catalogs.

Sales Rep Management

Create and store all information related to individual sales reps while controlling assigned accounts and monitoring performance. Sales reps will have access to a dashboard from which to organise their accounts and activity. The order delegation feature lets representatives make purchases on behalf of their customers, all dictated by authority level and role.

Quotation Dashboard

This feature ties into the 'Request for Quote', but from the sellers perspective. Admins can review, approve and/or edit requests. The dashboard also allows users to view pending requests, reply to messages and monitor negotiation history.

B2B Organisation Management

Easily view detailed information, status, orders and negotiation history from one place. Add new organisations including designated catalog, PriceBook, PromotionBook and credit limit while setting authority level.
